

Asmita Bhandari

Wixom, Michigan | asmitabhandari1234@gmail.com | (586) 413-1442

EDUCATION

Wayne State University, College of Engineering | Detroit, MI

Major: Bachelor of Science in Computer Science

Expected Graduation: May 2027, Junior

Honors/Awards: 3x Dean's List Recipient

Scholarships: WSU Gold Scholarship

TECHNICAL SKILLS:

Programming Languages: Python, JavaScript, TypeScript, Java, C++, SQL

Web Technologies: React, React Native, [Node.js](#), Express, HTML & CSS, FastAPI, RESTful APIs, Graphics APIs, PERN Stack

Tools: Git, VS Code, Docker, AWS, Supabase/Firebase, Stripe, Figma, 3D Printing

Databases & Data Management: PostgreSQL, MongoDB, NoSQL, Data Analysis

EXPERIENCE

Youth Tank Detroit	Detroit, MI
Student Software Engineer <i>Internship</i>	01/2026- Present
- Designed and implemented RESTful backend services in Python/Flask to manage structured urban infrastructure and community planning datasets. - Modeled relational database schemas in PostgreSQL to support multi-neighborhood connectivity mapping across a 27.5-mile greenway system. - Integrated third-party mapping APIs to build interactive, data-driven visualizations for public-facing web platforms. - Automated data aggregation pipelines to analyze comparative economic impact metrics from national greenway projects.	
Brilliant	Detroit, MI
Full-Stack Developer Intern <i>Internship</i>	01/2026 - Present
- Web Development & AI Integration: Utilized Python/Flask for backend frameworks and React for frontend development, incorporating AI integration to build cutting-edge internal applications for the Closures Technical Centre. - Backend Frameworks & Data: Constructed robust backend frameworks using Python/Flask, integrating with external data sources and databases (meeting their requirements to connect to external sources and databases). - Internal Tooling & Automation: Developed internal analytical and software tools to streamline engineering processes, supporting the management of large volumes of projects and improving overall departmental efficiency (matching their 'Build internal analytical... tools' requirement). - Full Product Development Cycle: Took ownership of the complete development lifecycle for designated products, including design, build, and test activities, in accordance with standard operating procedures and the product delivery process. - Front-End Ownership: Led Frontend development (UI/UX design, implementation) for internal applications and minor modifications, ensuring usability and modern design principles.	
Propvia	Detroit, MI
Frontend Developer Intern <i>Internship</i>	09/2025 - 12/2025
- Developed and optimized user-facing web components, improving page load speed by 25% and increasing user engagement. - Implemented responsive design that improved mobile accessibility by 30%, resulting in a more consistent user experience across devices. - Integrated third-party APIs to implement two new features, resulting in a 15% increase in lead generation. - Contributed to the core design systems, reducing component development time for new features by 20% and ensuring consistent branding across the platform. - Participated in 4-month agile sprints, consistently delivering tasks on time and contributing to a 95% on-schedule delivery rate for team projects.	
Hillside Jewelers and Gold Buyers,	Utica, Michigan
Backend/Data Systems <i>Internship</i>	05/2024 – 11/2024
- Designed and deployed an internal sales analytics dashboard using Python and SQL, providing real-time visibility into revenue and top-selling products. This enables data-driven decisions, reducing manual reporting time by 30%. - Collaborated on developing new React.js features, including dynamic product carousels and real-time inventory status, requiring implementation of underlying state logic and data fetching. - Resolved over 20 UI bugs through comprehensive cross-browser testing, ensuring data presentation and application logic consistency across devices.	

SELECTED PROJECTS

- Coffee Shop Sales Tracker: Engineered a full-stack sales tracker, utilizing Python for robust data aggregation on the backend and SQL for real-time analytics and database management, which reduced manual reporting time by 15% and improved inventory management
